Jay Thakkar

Cybersecurity Enthusiast | Full-Stack Developer | Android Engineer

coderjt25@gmail.com Ahmedabad, Gujarat, India Coder-Jay00 LinkedIn

Professional Summary

Computer Science Engineering student with hands-on experience in cybersecurity and full-stack development. Currently building production-grade security tools — from PDF malware analysis engines to threat intelligence platforms and system monitoring agents. Passionate about solving real-world problems through code, with 11+ projects spanning Android apps, web platforms, and security tooling.

Experience

Cybersecurity Intern — Nov 2025 — Present
Unified Mentor Private Limited

- Built **PDFSentinel** — a malware analysis engine using YARA rules, VirusTotal API, and heuristic scanning to detect malicious PDFs
- Developed **The Intelligence Brief** — a full-stack news aggregation platform with AI-powered summaries and automated GitHub Actions pipelines
- Created **WindowsWatch** and **LinuxWatch** — real-time OS monitoring agents tracking system metrics, user sessions, and security events
- Built **IPSentry** — a network surveillance tool with IP geolocation, threat scoring, and DNS analysis
- Conducted vulnerability assessments and implemented SIEM-based threat detection workflows

Web Development Intern — Aug 2023 — Sep 2023
J K Food and Hospitality

- Developed a Restaurant Management System with secure user authentication and XSS prevention
- Implemented role-based access control and responsive frontend using HTML, CSS, and PHP

Education

B.E. in Computer Science Engineering — 2024 — 2027
New LJ Institute of Engineering & Technology, Ahmedabad

Diploma in Computer Engineering — 2021 — 2024
LJ University, Ahmedabad

Technical Skills

Cybersecurity: Threat Analysis, Vulnerability Assessment, Malware Analysis, Network Security, Security Auditing, YARA Rules, SIEM

Languages: Python, Kotlin, Java, JavaScript, PHP, HTML5, CSS3

App Development: Android SDK, Jetpack Compose, Room Database, ExoPlayer, Retrofit, Material Design 3

Frameworks & Tools: Flask, FastAPI, Next.js, React, Docker, PostgreSQL, Git, Supabase, Vercel, Linux

Projects

Beats — Android Music Streaming App — `Kotlin, ExoPlayer, Room, Retrofit`
Feature-rich music player with online streaming, offline playback, synced lyrics, sleep timer, Bluetooth media controls, and dynamic album-art themes.

AuraTherapyCare — Therapist Management Platform `Flask, PostgreSQL, Supabase`
Full-stack healthcare platform with patient intake, therapist dashboards, analytics visualization, activity logging, and role-based access control.

FoodQuest — Food Delivery Platform `Next.js, React, Supabase`
Full-stack food delivery app with restaurant browsing, cart management, real-time order tracking, and responsive mobile-first design.

Cartify — IoT Smart Billing System `FastAPI, React, PostgreSQL, Docker`
IoT-integrated retail billing system featuring automated cart management, real-time inventory tracking via WebSocket, RFID theft detection, and security alerts.

Rewear — Sustainable Fashion Platform `Python, Odoo`
Built for the Odoo Hackathon — promotes clothing reuse and eco-friendly fashion through a community marketplace.

Certifications

- Basics of Cloud Computing — Udemy
- AI Governance & Compliance — Udemy
- Cybersecurity Threat Landscape — LinkedIn Learning
- TryHackMe Pre-Security Certificate — TryHackMe
- Coursera Certificate — Coursera
- Data Privacy Awareness — DSCI & MyGov
- Good Governance Quiz 2024 — MeitY & MyGov

Achievements

- **HackInovate Hackathon** — Built innovative solutions under time constraints
- **Odoo Hackathon** — Developed “Rewear” sustainable fashion platform
- **Good Governance Quiz 2024** — National governance awareness quiz
