

JAY THAKKAR

coderjt25@gmail.com — [LinkedIn](#) — [GitHub](#) — [Portfolio](#) — Ahmedabad, Gujarat, India

SUMMARY

Motivated Computer Science undergraduate with hands-on experience in threat analysis, vulnerability management, and secure web development. Proven expertise in applying security frameworks, conducting thorough audits, and developing secure applications that meet stringent industry standards. Adept at leveraging modern development tools to proactively identify system weaknesses and implement scalable defense mechanisms.

EXPERIENCE

Cybersecurity Intern

Unified Mentor Private Limited

11/2025 – 05/2026 Ahmedabad, Gujarat

- Conducted comprehensive security assessments and vulnerability analyses across organizational systems, effectively identifying and mitigating critical security threats.
- Executed continuous security monitoring activities and applied strict incident response procedures, maintaining system integrity and minimizing potential downtime.
- Collaborated closely with cross-functional teams to seamlessly integrate security best practices and secure coding standards into active development pipelines.

Frontend Developer Intern

JK Food and Hospitality

08/2023 – 09/2023 Ahmedabad, Gujarat

- Developed and deployed a robust Restaurant Management System, heavily focusing on secure user authentication, role-based access control, and strict data protection.
- Applied critical frontend security measures, including rigorous input validation, data sanitization, and comprehensive Cross-Site Scripting (XSS) prevention techniques.

EDUCATION

Bachelor of Engineering

New LJ Institute of Engineering and Technology, LJ University

07/2024 – 05/2027 Ahmedabad, Gujarat

Diploma in Computer Engineering

LJ University

08/2021 – 05/2024 Ahmedabad, Gujarat

SKILLS

Cloud/Tools: GitHub, Vercel, Docker, Linux, IoT

Security: Cybersecurity, SIEM, REST, XSS Prevention

Languages: Python, JavaScript, HTML, CSS, C/C++

Frameworks: Express.js, Flask, Modular, Benchmark

CERTIFICATIONS

Tata Cybersecurity Analyst Job Simulation

Threat intelligence and security operations

AIG Shields Up: Cybersecurity Simulation

Applied cybersecurity frameworks and incident response

The Cybersecurity Threat Landscape

Current threats, attack vectors, and defense mechanisms

Pre-Security Certificate

Essential security concepts and principles

PROJECTS

PDF Sentinel

- Developed a highly practical toolkit for the comprehensive static and behavioral analysis of malicious PDF files, successfully identifying phishing attempts, advanced exploits, and hidden payloads.
- Engineered advanced features to systematically extract embedded objects, analyze malicious JavaScript execution, and deeply inspect file metadata to detect weaponized documents.

Credential Attack Suite

- Engineered a highly modular credential auditing simulation suite to rigorously benchmark user password vulnerabilities against sophisticated dictionary, mutation, and brute-force attacks.
- Synthesized Windows SAM and Linux shadow file formats to realistically model target environments, dynamically calculating entropy and estimated crack times at 10GH/s.

Linux PrivEsc

- Built an automated, high-performance security scanner specifically designed to detect and flag common Linux privilege escalation vectors within local environments.
- Performed extensive read-only behavioral analysis to meticulously identify complex system misconfigurations that could potentially allow an unauthorized attacker to gain root access.

Cartify (Co-Creator)

- Co-created an innovative IoT-integrated retail billing system featuring real-time dynamic inventory management, smart shopping cart tracking, and secure POS checkout.
- Enforced rigorous security monitoring for shoplifting theft, cart collision detection, and implemented a comprehensive role-based access control (RBAC) authorization framework.
